Consortium Networks

Consortium Z:
Threat Intelligence Platform

CONSORTIUM

WHAT IT IS

Consortium Z is a no-cost, cloud-based threat intelligence aggregation platform.

Through this platform, you can quickly check your indicators against known malicious activity.

Helping Threat Analysts Overcome Common Challenges

Consortium Z allows a single point from which to search across multiple Threat Intelligence sources for faster threat detection and response. It is the redesign of the popular tool, OSINT Grabber, which allows users to query intelligence APIs to provide the user with data-centric view indicator intelligence.

With the ability to gather information from a multitude of open source and subscription-based intelligence services — Consortium Z provides a complete view of what security providers know about provided indicators.

KEY FEATURES

Intel Scraper

Takes free form text and parses out indicators resulting in a structured format usable by many tools, including Consortium Z itself.

Optional Feedback Form

Allows users to make public and private notes that are stored within the tool for later personal use or to provide additional context to others searching for the same indicator. Users can provide and receive feedback on previous indicator searches which may provide additional context and facilitate collaboration between organizations.

Search

Consortium Z will display the most commonly searched indicators and a search history for indicators over time as a heat map.

THE CONSORTIUM DIFFERENCE

Consortium Networks is committed to providing businesses with the most relevant, up-to-date technology information, with a focus on cybersecurity. By connecting technology customers, vendors, and experts, we strive to be the go-to resource for guidance regarding all of your IT requirements. We are the first organization dedicated to providing real-world feedback and data on solutions in operation in production environments at peer organizations.
